FALL SAFETY

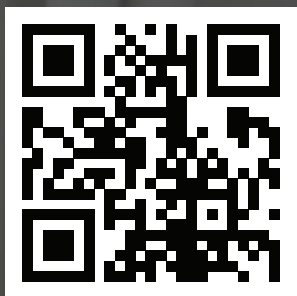

U-RES-Q

Suspension Trauma Self-Rescue System

It is common knowledge in the fall protection industry that every minute in suspension after a fall is extremely crucial. The U-Res-Q system can be used to relieve harness tension, and provide the means for a fallen worker to self rescue. Should a fall occur, the light-weight pouch automatically ejects a high strength, 16' rescue ladder. At this point the worker can climb back to safety, or simply stand in the ladder rungs to relieve harness tension.

- ✓ In the event of a fall, web rescue ladder auto-ejects to fallen worker
- ✓ Rescue ladder length 16', additional lengths available
- ✓ Climb or simply stand in the ladder rungs to relieve harness tension
- ✓ Available option to most shock absorbing lanyards

U-RES-Q

Self-Rescue System

The U-RES-Q is available on many FrenchCreek shock absorbing lanyards. A standard shock absorbing lanyard may save you in the event of a fall, but remaining suspended is another problem entirely. U-RES-Q lanyards should be used in conjunction with a full body harness.

R-RETRO

Retro-fit to any lanyard

U-RES-Q pouch

Used in-line with lanyard and anchor point

#Z74 (3/4" opening) locking snaphook

D-ring opposite end
